Year 13 Product Design - Revision list

Use the points below to help organise preparation for the mock exams at the start of the spring term.

- How designers improve the usability of products so they can be accessed by all
- How designs and the evolution of a product impacts the designs of other similar products.
- Used of 3D CAD and how it has helped develop the design industry.
- Quality assurance and quality control
- Writing specification points for products
- Comparing two products looking at their advantages / disadvantages.
- Patents and copyright
- Production scales, the different scales, their advantages and disadvantages and industry improvements in manufacturing techniques.
- You should know two different design movements and some examples of products from the two eras

As well as the above subject topics look at the example questions on past papers to see the amount of questions you should be answering from each section and how the questions are written.
