

Why choose an Applied Science BTEC?

If you have an inquiring mind and relish the opportunity to build on your scientific knowledge, Applied Science could be for you. The course covers a cross-section from the three pure sciences (Biology, Chemistry, Physics) and will introduce you to fascinating areas of cutting-edge science.

What will I study?

You will gain practical skills and an understanding of the basic scientific concepts. You'll also explore laboratory techniques used in scientific research. The course covers the basic principles of science, elements of biochemistry and medical physics. Optional modules include genetics and genetic engineering and the industrial applications of organic chemistry.

What career and university options can it lead to?

The BTEC course is a good foundation if you want to progress onto courses such as Biology, Chemistry, Biomedical Sciences, Computing, Food Science, Nursing, Radiography and many more.
