

Why choose Geography A Level?

Geography is central to understanding the way the world changes, affecting individuals and communities, the causes of these changes and their impacts upon people and the environment.

What will I study?

Geography at A level will help you develop a wide range of transferable skills including communication skills, technological skills, cartographical skills, problem-solving, numeracy and literacy skills. You will undertake fieldwork and individual research in a range of locations and gain an understanding of some of the most pressing challenges facing our world today.

What career and university options can it lead to?

Geography provides the opportunity to study a wide range of university courses and employers value the transferable skills you will gain. Career paths include teaching, surveying, architecture, geology and environmental consultancy amongst others.
