

Why choose an Information Technology BTEC?

ICT is at the heart of industries as diverse as entertainment, banking and manufacturing. As global economies grow, so does their need for efficient and dynamic ICT systems. This course will give you a good understanding of a broad range of ICT specialisms and will enable you to understand how ICT underpins business around the world.

What will I study?

From communication and employability skills for IT and how computer systems operate to learning how information systems combine software, hardware and communication networks, you will gain an overview of ICT that takes in e-commerce, database design, website production, software development and communication technologies.

What career and university options can it lead to?

Students can progress onto degree courses in Computer Science, Information Systems or related programmes. Alternatively you could use your skills by applying for an IT apprenticeship or go directly into work where the demand for ICT specialists is growing.
