

Title- Asia's Population Pressures

Powerful knowledge

China's One Child Policy brought in in 1970 to reduce rapid population growth, putting a strain on resources.
Issues include:
Infanticide
Higher Boy>Girl ratio
Ageing population

<u>Factors causing a natural increase</u>	<u>Factors causing a natural decrease</u>
Lack of birth control/family planning	Famine
Parents have more children to account for high infant mortality rate	Disease (for example HIV/AIDS)
Lack of education	War/Conflict
Rural tradition of large families	Government policies (One Child Policy)
Government policies	Lack of healthcare

Turkey-Syria earthquake occurred in 2023 on a collision plate margin with a magnitude of 7.8. 50,7000 killed and 107,000 injured. Cities in Turkey and Syria heavily damaged 9.1 million affected and 3 million displaced. 787,000 living in temporary camps nearly 1 year later

Kerala, India is controlling their population through: -
Investing in women's education
Only allowing maternity leave for the first 2 children
Free contraception
Vaccination programmes to improve child health.

Physical Geographies affect population distribution e.g coastal regions are more densely population due to access for trade. Deserts often have lower populations due to hot climate and arid land being unsuitable for farming/lack of available water.

Population	Inhabitants of a particular place
Density	The number of people in an area (per km2)
Population Distribution	The spread of people over an area
Overpopulation	Too many people for the available resources
Ageing Population	When the average age of a country exceeds 65
Birth Rate	Number of babies born per 1000 per year
Death Rate	Number of deaths per 1000 per year
Population Pyramid	Graph showing the distribution of age groups in a population
Biome	Large ecosystems with similar climates, landscapes, animals and plants.
Adaptation	Organisms and people have changed or evolved to survive to their surroundings
